

More Lies, Damned Lies, AnomaLIES and Sadistics.

Health Canada publishes vaccine data by manufacturer doses & by age group.

6 months to 5 years has only one approved vaccine (Moderna).

5 years to 12 years has only one approved vaccine (Pfizer)

So, the two tables should match.

Yet from August 14th to September 11th, 2022 there are some alarming **anomaLIES**.

This is outside the discrepancies between Health Canada and Provincial Data, which is supposed to be the actual source.

Looking at the drop in some vaccines and deeper at the Provincial data (reported by Health Canada), we find that **Ontario has not reported 5 years to 12 years data at all.**

Even in the one table, the numbers continue to not add up.

How can **70,123** have **at least one dose** in that time period but **373,651** had **at least 2 boosters**.

'**At least 1 Dose**' is the **SUPERSET** of all the other numbers. i.e. all the other groups **MUST** be lower.

Then when we move to the second table, the total doses given in that time period is **1,276,136** doses to **70,123** **people**.

Even if you assume the first (and third) columns are mislabeled ('at least'), the total of all columns in the Doses by Age group is only 582,099... That is still less than half the doses allegedly given in the manufacturer doses table.

Lives turn on these numbers and all government information. Question everything, until you get answers that add up...
