Good morning Bonnie

Here is today's cumulative AEFI report for BC.

Main points:

The most commonly reported events are allergic in nature, and include anaphylaxis which is a recognized and rare event that can occur with any vaccine. The reported rate of anaphylaxis in BC is about 1 case / 10,000 doses. All cases have been managed at the site and transferred for care to the ER; only one required hospitalization and all have recovered. A history of anaphylaxis to a dose of the vaccine is a contraindication to receipt of future doses.

We are seeing events reported as 'cellulitis' with an appreciably higher rate for the Moderna vaccine compared to Pfizer. s.13 none meet Brighton level 1 i.e., none were microbiologically confirmed. Some were not treated with antibiotics. The large differential rate between the products is consistent with the higher mRNA content (100 compared to 30 ug) per dose between the products; the mRNA acts as an adjuvant and this would be in keeping with what we see with adjuvanted vaccines and higher doses. s.13

s.13

s.13 This has been seen with other vaccines as well e.g., DPT-IPV compared to Tdap-IPV in younger children.

s.22

s.22

We have two temporally associated thrombocytopenia reports. This is NOT being seen in the US analytic data comparing rates of this event in vaccinees and compared to non-vaccinees; there was some media coverage of an O+G who died following COVID-19 vaccine in the US from this condition, but as you know this is associated with a variety of causes and the VSD rapid cycle analysis data are pretty solid (see slide 24):

<https://www.cdc.gov/vaccines/acip/meetings/downloads/slides-2021-01/06-COVID-Shimabukuro.pdf>

Thank you,  
Monika

March 2021 (3 months in) the CMOH was aware of 79 cases of Anaphylaxis and 46 cases meeting the Brighton level 1/2/3.

<https://dksdata.com/ONSDATA#BCLatest>

In the UK with more than 113 million vaccinations over 6 years they reported 130 for the whole country!

Hi,

We don't get updated rates in time on Mondays so here are the counts:

	Cumulative COVID19 Count
Total AEFI	469
Serious AEFI	124
Anaphylaxis	79
Anaphylaxis Brighton levels 1/2/3	46
Other allergic	189

Heather

PHAC (Canada) expects 1.3 per million.  
 Canada reported 1 in 100K (10 times expected).  
 BC was seeing 1 in 10K in the first 2 months of the rollout or 100 times expected.  
 We haven't even hit the most likely age for Serious AEFI yet (65% in under 2).

## How bad will it get?

<https://www.canada.ca/en/public-health/services/publications/healthy-living/canadian-immunization-guide-part-2-vaccine-safety/page-4-early-vaccine-reactions-including-anaphylaxis.html>

## Anaphylaxis

Anaphylaxis is a serious, potentially life-threatening allergic reaction to foreign antigens; it has been proven to be causally associated with vaccines with an estimated frequency of 1.3 episodes per million doses of vaccine administered. Anaphylaxis is preventable in many cases and treatable in all. It should be anticipated in every vaccinee.

<https://health-infobase.canada.ca/covid-19/vaccine-safety/#seriousNonSerious>

Up to and including May 13, 2022, the most commonly reported AEsIs were myocarditis/pericarditis and anaphylaxis (Table 1).

To align with standard reporting practices, for AEsIs with a BCD, only those meeting the BCD level of certainty 1 to 3 are reported. BCD level 4 AEsIs (indicating not enough information to confirm the diagnosis) are not included in the case counts and rate calculations. BCD level 4 is presented separately in Table 1 during this transition to highlight the impact of this change.

**Table 1. Count of reported adverse events of special interest by vaccine type (Total)** up to and including May 13, 2022 (n=6,885).

AEI Category	AEI	Total number of events
Other system	Anaphylaxis <sup>1</sup>	840
	COVID-19 <sup>3</sup>	513
	Multisystem inflammatory syndrome <sup>1</sup>	15
	Subtotal	1,368

\*Brighton Collaboration Definition

<sup>1</sup> Includes adverse events meeting levels 1-3 of the [Brighton Collaboration level of diagnostic certainty](#).

And what about falls, strokes, sudden deaths, and other such events we keep seeing?

One of the first 'temporal associated' deaths in BC (so much of a concern that it was shared widely with Tam, Henry, et al...) was after a fall.

Subject: HEADS UP: CSC death

**[EXTERNAL] This email came from an external source. Only open attachments or links that you are expecting from a known sender.**

Hello Bonnie,

I wanted to give you a heads up regarding a death in a CSC inmate who received Moderna vaccine on s.22 (first dose), and who subsequently died on s.22

This individual, aged s.22, with s.22, was s.22

s.22 They received vaccine to ensure no wasted doses from vial provided to vaccinate other s.22 inmates at that institution.

Vaccine administered uneventfully on s.22.

s.22 – noted sore arm only, but subsequently experienced a fall (was documented to be s.22

s.22

s.22 – ongoing monitoring due to fall, but no adverse events attributed to vaccination.

s.22 – became unresponsive, emergency code called, BC Ambulance attended, however resuscitation unsuccessful.

s.22 – individual declared deceased.

At this point in time, CSC does not consider the death to be linked to the vaccine. However:

- CSC protocol is that coroner is notified of all inmate deaths and determines what further investigation will take place
- CSC reports adverse events following immunization (AEFI) via local public health units (in this case, s.22 in BC).
- All CSC deaths in custody are reported publicly with a news release.

CSC colleagues wanted to ensure that you were aware, and that there be coordination on communications products, given temporal association with vaccine.

CSC will reach out to s.22 to coordinate reporting/comms etc.

I've included Jennifer Wheatley who is the Assistant Commissioner for CSC Health Services nationally on this email.

Let us know if there are others who should be looped in.

Thanks

Barbara

Barbara J Raymond MD

Executive Medical Advisor / Conseillère médicale exécutive

Vice President's Office, Infectious Disease Prevention and Control Branch

Considering how well this was 'coordinated' for communication and how the focus was on 'temporal association', how was this death reported?

No mention of vaccine or a fall... just 'APPARENT' natural causes... What does that even mean?  
<https://canada.ca/en/correctional-service/news/2021/01/death-of-an-inmate-from-pacific-institution.html>

<https://www.canada.ca/en/correctional-service/news/2021/01/death-of-an-inmate-from-pacific-institution.html>

## Death of an inmate from Pacific Institution

---

From: [Correctional Service Canada](#)

### News release

January 19, 2021 – Abbotsford, British Columbia – Correctional Service Canada

On January 17, 2021, Camille Joseph Cleroux, an inmate from Pacific Institution died while in our custody of **apparent** natural causes.

At the time of his death, Mr. Cleroux had been serving a life sentence for first degree murder and second degree murder x 2 since June 26, 2012.

As in all cases involving the death of an inmate, Correctional Service Canada (CSC) will review the circumstances. CSC policy requires that the police and the coroner be notified.

I received a call or email (I don't recall) on Dec 24<sup>th</sup> saying there was a person who had an allergic reaction at the clinic in the north at the clinic at the hospital. That they received epinephrine and were observed in the ED for a few hours. I understand it was a s.22 . I don't recall who sent me the info Jong, sorry.

Then there was a second one later that day in FH.

LEAVE OUR KIDS ALONE!

Canada 2019 Pre COVID

115 SERIOUS AEFI reported.

65% injured were under 2 yrs old (75% 6 and under).

Next week children 6 & under start 3 DOSES of Moderna & Pfizer.

COVID has 9,515 SERIOUS AEFI, in an age group accounting for 25% of SERIOUS AEFI!
